

Dear Ladies and Gentlemen,

as agreed in the Community Call before Christmas we are in progress of setting up a new QR code Validation Cycle which is planned to start on **January 31st**.

Within the Validation Cycle all countries shall validate reference codes of all other countries and report back the findings. This shall help to identify and fix any inconsistencies and interoperability issues and by that to increase the quality of the entire EU DCC solution.

In order to perform the validation, countries will receive a link to a portal which allows scanning of the codes and entering the test results in a comfortable way (link to be distributed in due course).

In preparation of the Validation Cycle, we kindly ask all countries to submit a set of reference QR codes (one per type that is issued in your country: TEST, Recovery, Vaccination¹) to the [dcc-quality-assurance repository on Github](#) by placing a Pull Request.

Please provide the following sample covid19 certificates **signed with a DSC that is available on the ACC environment**:

1. Recovery certificate valid from [**17.01.22, 06:00am CET**]
Filename: REC_*.png
2. Test certificate valid from [**31.01.22, 06:00am CET**]
Filename: TEST_*.png
3. A **Booster** Vaccination certificate valid from [**17.01.22, 06:00am CET**]
Filename: VAC_*.png

Only for countries which have implemented the Business Rules feature:

4. Recovery **OR** Vaccination certificate like (1) or (3) but
invalidated by an invalidation rule
Filename: REC_*_invalidated.png OR VAC_*_invalidated.png

Only for EU member states which have implemented the Revocation List feature:

5. Recovery OR Vaccination certificate like (1) or (3) but revoked through an entry in the
Revocation List
Filename: REC_*_revoked.png OR VAC_*_revoked.png

The * is a wildcard and shall be deleted or replaced by your own identifier. Please use letters and numbers only. No spaces

Please submit the QR codes not later than January 27th, 6:00am CET!

Your support is much appreciated!

TSI Onboarding Team

¹ If a country does not issue a certain type of QR code, there is no need to submit a code for this type
